VulnScope AI — Security Assessment Report

Target: http://127.0.0.1:3000
Assessment date: 2026-10-24 13:02:59
HTTP status: 200

Scope and limitations

Limited passive checks against a localhost lab. Findings are unverified indicators, not proof of exploitability. This is not a full penetration test.

Findings

VS-ED82A0 — Missing Content-Security-Policy

Severity: MEDIUM

Evidence: Content-Security-Policy header absent in response

Recommended action: review the relevant web-server or application configuration, apply an appropriate fix, then retest.

VS-1005E7 — Missing Referrer-Policy

Severity: LOW

Evidence: Referrer-Policy header absent in response

Recommended action: review the relevant web-server or application configuration, apply an appropriate fix, then retest.

VS-017F09 — HTTP used instead of HTTPS

Severity: MEDIUM

Evidence: The local target was accessed over HTTP; assess TLS in an appropriate environment.

Recommended action: review the relevant web-server or application configuration, apply an appropriate fix, then retest.
